The Business Advantage Group's Worldwide CAD Trends 2015 Results

CAD Software Upgrades Deliver Real Business Value

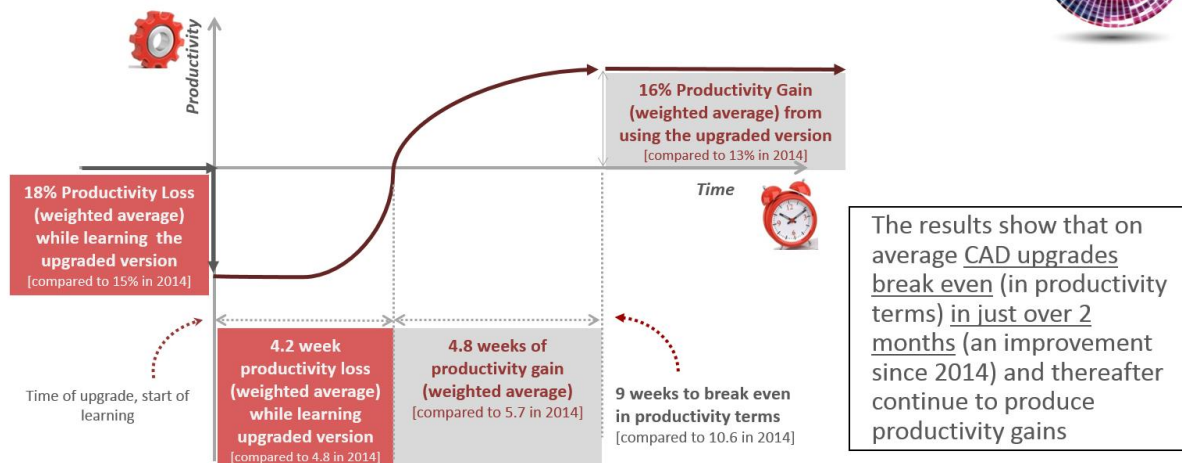

Upgraders see 16% Productivity gain within 2 months

The IT, software and telecom industry research specialist, The [Business Advantage Group](#) recently announced the results of its [Worldwide CAD Trends 2015 Survey](#) and this week announced more details specific to software upgrades during the last year.

“These survey results are based on responses from CAD users, Designers, Engineers, Professionals including managers and senior executives. Just over half of those surveyed had upgraded, changed or added to their CAD software in the last 12 months. To determine the business value of software upgrades to users we asked some or all of these productivity questions.

1. Was there a temporary loss of productivity soon after implementing or upgrading your CAD software?
2. What was the loss of productivity soon after implementing or upgrading your CAD software?
3. For how long did the loss of productivity last?
4. Once your company learned the new software what productivity increase have you achieved over the previous way you worked?

Value in Software Upgrades?

“The good news is that those who upgraded their CAD software during the last year, on average, saw a 16% productivity gain attained, on average, within 9 weeks of upgrading (for comparison, in 2014, the average gain was 13% achieved in 10.6 weeks),” said Chris Turner, CEO/Managing Director of Business Advantage. “26% acknowledge temporarily losing productivity during the upgrade process, the average loss while learning the upgraded version was 18% and this lasted an average of 4.2 weeks (for comparison, in 2014, the average loss was 15% and it lasted for 4.8 weeks). Based on the survey findings, both users and software vendors are getting better at managing the upgrade process to higher levels of productivity in less time. We can therefore conclude that CAD software upgrades are delivering a net productivity gain and hence real business value.”

The Worldwide CAD Trends 2015 Survey Report is a high level report and many deeper insights are available from the full data set. If you are interested in more detailed analysis/insights, for example by region, industry or software vendor, then please feel free to contact us.
